

Quiz 4 (#9)

Your name: Yuta Nemoto

Your student no.: m5231153

- 1) Which syntax is used to render a variable inside a Django template?

`{{ variable }}` is used to render a variable.

e.g. assume the string "John" and "Toyota" are assigned to the variable 'user' and 'car' each, then the template

User `{{ user }}` has a car `{{ car }}`

generates a html: User John has a car Toyota.

- 2) Which template construction is needed to render a list of values enclosed into `...` tags?

`{% ... %}` sequence is used to render.

e.g. ``

`{% for p in people %}` generates a list of every people contained
`{{ p }}` in the 'people' variable.

`{% endfor %}`

``

- 3) What is the main purpose of sessions?

To save some data between the requests.

- 4) What is the main purpose of forms?

To group user controls that should be processed in one request.
